of annotations omitted. Note: remainder

* NOTE: This record contains 76 individual

* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NOTE: This record contains 87 individual sequencing reads that have not been assembled into configs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Center code: WIBR

                                                                                              for Genome
                                                                                                                                                                                              * NOTE: This record contains 234 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* defntifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Title:

>US-09-249-003-2 (1-550) from US09249003.pep 4069 1 MPPPRTGRGLLMLGLVLSSV.....QDHNMYNDSQGGDLFQLLMP 550 Description: Perfect Score: Sequence:

PAM 150 Gap 11 Scoring table:

82229 seqs, 29864866 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot38 1:swissprot Database:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. Mean 52.053; Variance 88.452; scale 0.588 Statistics:
